

David Watson CET, President of Digicon Inc.

David Watson is President of Digicon Information Inc, with over 30 years of construction industry experience.

David's early construction career involved positions as contractor (estimator), design, specifications consultant, and product sales. As a self-learned software developer and experienced sales skills, Watson combined his expertise with his father's independent specification practice, and together they formed Digicon to take the specifications and software to market in 1996.

Digicon is one of Canada's two developers of commercial master specifications and related software, and offers consulting services related to specifications and product information. With Digicon's developers, David architected Digicon's newest flagship software, BIMdrive, to integrate specifications with building models (BIM).

In a corporate alliance with Construction Specifications Canada (CSC), David manages the Spex.ca document store marketing documents published by Digicon, CSC, and the National Master Specification (NMS) produced by PWGSC.

Watson is involved in a wide variety of volunteer professional organizations.

David has assisted in the architecture and design of the Ecospex web site, and will assist Ecospex manufacturer clients to offer quality specifications.

When he's not working, David enjoys private aviation, and can be found performing in his Harvard at air shows in western Canada.
