

Kyle Anders, MSc.(Eng).

Manager of Sustainable Housing at Mindscape Innovations
External LEED Verifier for Ecospex

Kyle joined Mindscape in 2009 and is currently responsible for technical development of home energy modeling tools, residential energy efficiency consulting, green building certification project management, and building product evaluations.

Kyle oversees the alignment of all Ecospex Premium Verified product listings with the LEEDv4 green building rating system, as well as other rating systems on request. He has also helped develop and streamline the LEED verification process.

Prior to joining Mindscape, Kyle's previous experience included Master's degree research in corrosion performance of sustainable building materials, working as an engineering intern at a high-volume electro-refining cathode manufacturing plant where he optimized process design and energy use, and student team engineering leader in sustainable energy initiatives at the University of Waterloo.

Kyle brings strong technical knowledge of building energy systems. This is complemented by his strong research and development background in the mechanical engineering and materials science field, which has provided him with well-honed skills in critical thinking and technical communication.
